

Picture at left shows students (l-r) Ishrat Kahn, Madeeha Zaheer & Akar Patel printing a "4 color process" document on the Ryobi 3302HA Offset Press. This printing process uses four semi-transparent inks; black, cyan, magenta and yellow, and with these four inks the illusion of color is created. In the top picture Madeeha is using a quality control device called a densitometer to help her maintain color consistency throughout the press run. The bottom pictures show the document being folded and stitched into an eight page booklet by Ishrat and Madeeha.
